EDUCATION

SRM Institute of Science and Technology

B.Tech in Computer Science and Engineering - CGPA 9.09/10

September 2020 – May 2024

Kattankulathur, Tamil Nadu, India

Burn Hall School

Class XII - 92.2%

2019 – 2020

Srinagar, J&K, India

EXPERIENCE

Engineer I Software Development

July 2024 – Current

Verizon | GenAI, Spring Boot, Spring Reactive, Java, React.js, Node.js, Express.js, React Native | Chennai, India

- Served as lead developer in migrating the Cradle services' configuration from AEM to AWS and integrating AWS Feature Flags, improving scalability and reducing configuration management overhead by 30%.
- Developed a CSRF filter in the Spring WebFlux + Spring Boot production backend, reducing CORS issues to 0%.
- Improved business logic across multiple endpoints in the production backend, thereby reducing security vulnerabilities by 8%.
- Built a high-performance React Native mobile app POC for the My Verizon App, reducing page load time by 1.11s compared to production.
- Engineered an automated feature flag gating system using Node.js that validates merge requests; it automatically comments on and closes non-compliant MRs, boosting code approver efficiency by 20%.
- Investigated UI requests to backend endpoints in Kibana spanning 47 services, and implemented backend framework changes that resolved missing values in 841 endpoints.
- Built an end-to-end feature involving dynamic API calls in React.js & Node.js-based tool called Platform Edge, of having a tab in the UI that shows the merge requests approval activity of each code approver in detail.
- Built various full-stack features leveraging GitLab and Jira APIs for the Platform Edge tool, boosting the Platform Team's efficiency by 15%.
- Wrote unit tests with JUnit and Mockito, increasing code coverage to 95%.

Student Intern

February 2024 – July 2024

Verizon | React.js, Node.js, Express.js |

Chennai, India

- Developed Node.js-based automation that sends Slack/email alerts every 30 minutes to code approvers for pending merge requests, and daily review reports to leadership, reducing merge request review time by 8%.
- Built dynamic UI tabs in React.js to display merge request data in the MERN-based tool, Platform Edge.

Web Development Intern

February 2022 – March 2022

BooksApp | React.Js, JavaScript, HTML, CSS |

Remote, India

- Designed and developed a responsive landing page for a Dubai-based cargo company using React.js, JavaScript, HTML, CSS, and Bootstrap, resulting in a 14% increase in contracts generated through the website.

SKILLS

Languages	JavaScript, Java, C++, SQL
Databases	MongoDB, PostgreSQL, Firebase
Frameworks & Libraries	Spring Boot, Spring Reactive (WebFlux), React.js, Node.js, Express.js
Tools & Platforms	GenAI, Prompt Engineering, MCP Servers, RAG, JMeter, GitLab, CI/CD, Jenkins, Postman, Jira, ChatGPT, Copilot, Gemini, Perplexity
Concepts	Data Structures & Algorithms, Operating Systems, Object Oriented Programming, Database Management Systems, RESTful APIs

PERSONAL PROJECT

FinDash | React.js, Node.js, Express.js, MongoDB, Mongoose, Machine Learning [\[UI Code\]](#) [\[BE Code\]](#)

- Built the Node.js backend of a full-stack finance dashboard featuring interactive charts, tables, and scatter plots to visualize revenue, expenses, profits, product prices, and transaction data.
- Also has a predictions page powered by a linear regression ML model to forecast annual revenue, supporting strategic planning.

ACHIEVEMENT

- Selected for the prestigious **CERN Summer Student Programme** in **Geneva, Switzerland**, a highly competitive global internship for research and software development.
